The following table shows the **A** values for the various isotopes of the **A** series of radionuclides. The **A** value is the activity of a unit mass of a radionuclide in a state of secular equilibrium with its parent. The **A** value is a measure of the rate at which a radionuclide decays. The **A** value is expressed in units of Bq kg^{-1} .

The **A** value for the **A** series of radionuclides is **74,600,300** Bq kg^{-1} .

As a result, the β parameter is not a good indicator of the degree of the nonlinearity of the system. The β parameter is only a good indicator of the degree of the nonlinearity of the system when the system is a simple nonlinear system. In this case, the β parameter is a good indicator of the degree of the nonlinearity of the system. In this case, the β parameter is a good indicator of the degree of the nonlinearity of the system.
